Eat Locally.  
Start Now.*

## **Edible Landscaping For Riverside County: An Evening With Ecological Designer Darren Butler**

Tuesday, February 3, 2009 6:00pm Riverside Public Library

FLOWERS

HERBS

VEGETABLES

TREES

**Do you want to save time, money, and resources?  
Allocate more of your existing yard to food plants!  
It's easier than you think.**

Rototillers? *No way; they shred soil life.*

What's the most important thing I can grow? *Fertile SOIL.*

Do I need a cistern to catch rainwater? *Use the soil first.*

Four different fruit trees growing together as one tree? *Yes!*

With food and energy prices rising steadily and humanity straining Earth's resources and systems, landscaping with edibles is more important than ever for personal, community, and global sustainability.

*Ecological Landscape Designer Darren Butler's methods for edible landscaping differ from other popular methods in that they focus on edibles as one part of a broader sustainable landscape, and create living systems to naturally increase yields and minimize maintenance.*

In this evening seminar, Darren will discuss general edible landscaping for Riverside County and some specific features of his method.

*Suitable for professionals, homeowners, community activists, volunteers, chefs, kitchen gardeners, and foodies.*
