

**MARYLAND**

## **SEE THE GREEN: Integral Systems**

**Join us for a tour of the LEED CI v2.0 Silver Registered Project**

Enjoy a guided exploration of the new corporate headquarters of Integral Systems, Inc., who provide satellite communications & ground systems for government agencies and private companies.

The 130,000 square foot space was designed by Gensler Baltimore; the concept being to highlight the dichotomy of earthly and stellar elements as they relate to Integral Systems' business.

This concept was realized through selection of materials, including terrazzo floor tile with sparkling mirror accents, deeply-textured stone walls, sleek glass conference room walls, and lighting concepts, such as lines of light and floating orbs.

This was a challenging project as the design and construction documents were done in a 12 week period; the project is also in the process of submitting for a LEED CI Silver rating. The project designer, Mary Ellen Evanko, IIDA, LEED AP, will be our expert guide.
