

USGBC - St. Louis Regional Chapter *in partnership with Construction Specifications Institute*

Using Native Plants in Large-Scale Landscaping Projects

Scott Woodbury
Shaw Nature Reserve

Native plants enhance our communities and our buildings by attracting wildlife, reducing pesticide and herbicide use, managing storm water, and reducing water use. They are also beautiful! Join us to hear Scott Woodbury talk about large-scale applications for native plants, including community, corporate and highway projects.

Scott Woodbury is the horticulture supervisor at Shaw Nature Reserve, where he has been developing the five-acre Whitmire Wildflower Garden for 14 years. The wildflower garden features Missouri plant communities such as prairie, savanna, glade, woodland, and wetland.
